

How we see
The Business Vision
&
The Business Mission
within the energy market

The Business Vision

Our Business Vision is to have Worldwide the best LEAN BUSINESS OPERATIONS in the field of ENERGY PROCESSES.

We see the Operations developing all Business Vital Functions and being a cornerstone for a real GLOBAL OPERATIVE NETWORK animating our activities along the Value Creating Chain.

The Market driven Network is the required infrastructure to market and operate Turnkey Projects Worldwide, which perfectly fit the real needs of our Customers: function-, scope-, geography- & competitive price-wise.

We deeply believe that the whole Community contributing to the Value Creation Chain (Customers/End-users, Shareholders, Employees & Suppliers) have to be rewarded for their contribution on a WIN-WIN basis.

We believe by doing so, we will effectively contribute to the prosperity of the Community, supporting our Customers to match the by market ruled prices for their final products, saving Energy, natural resources and protecting the environment.

The Business Mission

Contributing to our Customers efforts to downsize the cost in consistence with the price paid by the market for each kWh to be injected into the Electrical Power Grid, on a Win-Win basis.

We realise that to do so, we will need to harness the intellectual energies and creativity of all our stakeholders, based on long-term, shared-destiny

Therefore our mission is to the 4 key partners related:

Shareholders

Customers

Employees

Suppliers

The Business Mission

Shareholders Related

Transforming ourselves and adjusting all actions along the Value Creating Chain in order generate Shareholders Values, on a WIN-WIN basis: a Return on Investment complying with the Market Level, on a steady basis.

Customers Related

Transforming ourselves to adjust to the rules made by the market forces, doing everything to become better than anyone else to help customers to fight for market share.

Employees Related

We will strive to create a community of employee stakeholders who are committed to the company, the customer, quality, and continuous improvement, the way dictated by the Market Rules.

Suppliers Related

We see our suppliers as important actors, and are increasingly working in partnership, exclusively with those who are aligned with our Mission and contribute to achieve it. We will continuously striving to make our total enterprise activities, from raw material to the end-user, as lean and efficient as possible through a process of continuous mutual learning and up-skilling.
